Chair, ABMS Maintenance of Certification (MOC) Committee

RE: ABMS White Paper on MOC CME

During its meeting in December 2010, the ABMS MOC Committee officially received the ABMS/ACCME Joint Working Group on MOC CME white paper. Per the committee's request, additional text was incorporated to provide stakeholders with a better understanding of the white paper's purpose within the context of the future development and refinement of an MOC CME framework. Upon review and approval by Dr. Daniel Duffy, the MOC Committee Chair, the final version was included in the ABMS Board of Directors' January 2011 Retreat materials.

The MOC Committee also endorsed the dissemination of the amended white paper to external parties for further discussion and development. Please note that while the white paper is being broadly distributed within the ABMS Board Enterprise, it is also being shared with leadership of the Alliance for Continuing Medical Education (ACME), the Society of Academic Continuing Medical Education (SACME), and the National Institute for Quality Improvement and Education (NIQIE) for review and comment. With this distribution approach in mind, we also encourage you to forward this white paper to educational leaders within your respective societies, academies, colleges, academic institutions, and other educational partners.

All interested individuals and entities are encouraged to submit comments to inform the MOC Committee as they guide the ongoing evolution of the ABMS MOC program. Comments are to be received in written form sent to the attention of the ABMS MOC Support Program or via email sent to ABMS_MOC_Support_Program@abms.org by Tuesday, March 1, 2011.

White Paper: CME for MOC
ABMS/ACCME Joint Working Group on MOC CME
January 2011

1 **Background:** The ABMS/ACCME Joint Working Group on MOC CME was proposed by the ABMS
2 MOC Task Force in 2009 and was charged to serve as a “think tank” to explore the concept of MOC
3 CME during 2010. Representatives were appointed by both ABMS and ACCME, based upon their
4 expertise and experience in CME accreditation policies and program planning. The Working Group was
5 co-chaired by Debra Perina, MD (ACCME Chair) and Tom Norris, MD (ABMS Vice-Chair). Additional
6 Working Group members included David Davis, MD (ABMS), Nancy Davis, PhD (ABMS), George
7 Mejicano, MD (ABMS), Ajit Sachdeva, MD (ABMS), Richard Berger, MD, PhD (ACCME), Karla Matteson,
8 PhD (ACCME), Richard Reiling, MD (ACCME), and Sterling Williams, MD (ACCME). Senior leadership
9 and staff from both organizations also served as facilitators and supported the working group. The
10 working group had one conference call and two in-person meetings.

11
12 Initially, the group focused on key topics that would inform their subsequent discussions of MOC CME.
13 The initial agenda included presentations and group discussion regarding the evolving standards for
14 MOC and the related implications for CME; the current state of CME accreditation systems; the current
15 status of CME credit systems; and the differences among what the ABMS Member Boards accept in
16 terms of CME (for Part II and Part IV). With this information in mind, the group began its discussions
17 and prepared the following recommendations. As noted in these recommendations, the ABMS MOC
18 Committee is tasked with developing a proposed implementation plan. Throughout 2011, the MOC
19 Committee will refine its proposed implementation plan and present this plan within the context of an
20 evolving MOC program.

21
22 **Findings:** The group first reaffirmed that MOC CME appropriately exists as a distinct subset within the
23 universe of accredited CME. MOC CME possesses a discrete set of characteristics enabling it to
24 optimally support the principles and objectives of MOC.

25
26 Traditionally, CME was thought to be relevant to only Part II. However, MOC CME has relevance to all
27 4 Parts of MOC creating a cyclical linkage between guided self- assessment of knowledge and practice
28 and education and practice improvement activities across the MOC framework. Strengthening this
29 linkage could stimulate and promote diplomate practice improvement and professional growth.

30
31 The characteristics of CME that are of specific relevance for MOC were divided into three focus areas
32 and include the following:

- 33 • Clinical (and Professional) Content
 - 34 ○ Learner Centered--diplomates are expected to ensure the practice relevance of the
 - 35 educational or practice improvement activity and to demonstrate learning and/or
 - 36 improvement outcomes.
- 37 • Educational Format and Quality
 - 38 ○ CME Provider (program) Centered--characteristics of CME programs would include the
 - 39 deployment of appropriate learning needs and practice outcomes assessments, the use
 - 40 of educational formats that have been shown to correlate with desired learning
 - 41 outcomes, and compliance with commercial support/influence requirements
 - 42 subsequently approved for MOC CME. The clinical content of the educational program

43 must be supported by the best available evidence, and the level of evidence supporting
44 the educational content must be transparent to the learner.

- 45 • Requirement for Proportional Coverage of the ABMS/ACGME Competencies
 - 46 ○ Historically, CME has been heavily oriented toward acquisition of medical/clinical
47 knowledge. MOC CME must include education and skill development that addresses
48 the broader set of ABMS/ACGME competencies; learners should ensure that their
49 CPD/CME efforts, in sum, include learning in all six competencies.

50
51 The differences between Continuous Professional Development (CPD) and Continuing Medical
52 Education (CME) as related to MOC CME are important. CPD may be defined as what the physician
53 does to remain current, expand awareness, knowledge and skills, and provide quality care, while CME
54 represents the educational and practice improvement tools and resources used in support of CPD.
55 Therefore, MOC CME is more appropriately considered a CPD model.

56
57 The roles financial relationships with industry should play in regard to MOC CME were explored.
58 ABMS serves as a public trust and published articles suggest the public's perception concerning
59 commercial funding of CME for physicians is not positive. As such, it is important for ABMS to reflect
60 both the reality and perception of the consequences of relationships between industry and physicians, as
61 well as between industry and CME providers. Both sets of relationships have come under public
62 scrutiny, and both deserve consideration. Commercial entities provide close to one billion dollars of
63 annual support for CME, and this support has the potential to influence both the content and the
64 availability of educational programs.

65
66 The working group considered the continuum of acceptable commercial support. On one end of the
67 continuum is the current state (i.e., commercial support is allowed in accordance, at a minimum, with
68 the ACCME's Standards for Commercial Support, which require that planning, delivery, and evaluation
69 must be independent of commercial influence). On the other end of the continuum was the position
70 that no commercial support of any kind would be acceptable. Initial discussion addressed the issues of
71 public trust versus public perception and the influence of commercial support on the national CME
72 curricula. The positive role of commercial support was also considered. There may be alignment
73 between commercial support and the public interest to the extent that commercial support may
74 1) facilitate affordable access to CME activities for physicians (especially physicians in rural and/or
75 underserved areas); 2) accelerate the translation of new science and technologies into clinical practice
76 and drive practice change (the importance of this aspect for equipment dependent specialties such as
77 surgery and radiology was emphasized); 3) promote multi-center or multi-provider group activities; and
78 4) encourage educational innovation. Commercial support may become less of an issue if educational
79 content is relevant to practice, evidence-based, practice-based, and includes core competencies.
80 Ultimately the recommendations must consider what is best for patients, regardless of the mechanism of
81 support. It is recognized that allowable levels of commercial support may vary among Member Boards.

82 83 **Recommendations:**

- 84
85 I. ABMS and the MOC Committee should assist the Member Boards in facilitating the
86 development of approaches to CME for MOC Part II and Part IV that emphasize "informed
87 learning" or "formative CME/CPD" for diplomates that incorporates the following
88 characteristics:
 - 89 a. Addresses self- or externally-identified practice gap(s)

- 90 b. Is relevant to the physician's scope of practice
91 c. Utilizes evidenced-based content (best available which is shared with diplomates)
92 d. Includes established professional standards of care/behavior (when available)
93 e. Demonstrates that planning, delivery, and evaluation is independent of commercial
94 influence
95 f. Reflects preference for sequential programming (presented in multiple formats) to
96 reinforce learning
97 g. Includes formative and/or summative assessments
98 h. Documents learning and performance or outcome improvement
99 i. Utilizes effective instructional approaches such as interactive, case-based, team-based
100 learning
101 j. Includes concepts of quality improvement and patient safety
102
103 2. The ABMS and the MOC Committee should assist the Member Boards in developing
104 approaches to Part II and Part IV MOC CME that emphasize coverage of all core competencies.
105 These approaches should:
106 a. Address the unique educational needs of each Member Board's scope of practice
107 b. Be based on formative and/or summative assessment (including Part I peer/patient
108 surveys and Part III examination results to further integrate all parts of MOC)
109 c. Encourage the integration of multiple competencies within single programs (i.e., medical
110 knowledge, system-based practice, and communication), and inclusion of all
111 competencies within the entirety of a diplomate's CPD program
112 d. Ensure that Part II activities inform Part IV participation, and that Part IV activities
113 inform Part II educational needs
114
115 3. ABMS and the MOC Committee must consider the diplomate-centered and program-centered
116 characteristics of MOC CME in subsequent discussions regarding development and integration
117 of MOC CME into the MOC framework and standards.
118
119 A general framework for MOC CME must be developed that assures the public trust by
120 progressively eliminating or reducing, to the extent possible, influence exerted by commercial
121 entities.
122
123 The MOC Committee should include feedback from the ABMS Ethics and Professionalism
124 Committee, other related standing committees, and public input, to allow full consideration of
125 perceptions of specific bodies and the public to assure optimal degrees of separation between
126 educational and commercial interests.
127
128 4. The MOC Committee should continue discussions with the ACCME and others regarding the
129 development of a "standard currency" for MOC CME that would ensure interchangeability of
130 programming between Member Boards, and other stakeholders, and would also identify the
131 special nature of CME programming that meets the identified characteristics of MOC CME.

This document was received by the MOC Committee on December 06, 2010.
